## **Basics of Networking for Service Engineers**

This course teaches service engineers the skills to assist in troubleshooting communication problems relating to digital imaging systems. It's often the responsibility of service engineers to solve the problem, as IT departments can be reluctant to assist with medical equipment. This course gives service engineers tools to isolate the problem between the modality vs the IT network and effectively communicate the results to the IT department (if necessary) to resolve the issue.

**Course Dates: 11/27/2018 – 11/29/2018**
